

FIELDCLAW

Field intelligence layer for construction execution

Rishi Divyakirti · Harshit Tomar

IIT Kanpur · 4th Year Undergraduate

PROBLEM

Different versions of the truth on the same site

McKinsey: the area supervisor, project manager, planner, and owner often disagree on what is going on because they do not get the right information in time — or the same information.

[mckinsey.com](#) — [The construction productivity imperative \(2015\)](#)

98%

of megaprojects overrun cost by more than 30% — when the site picture is late or split

[McKinsey, 2015](#)

Relay

Field asks → phone chain → lost record. Crew learns when work already stalled.

Mechanism — next slide

48%

of U.S. rework from poor project data and miscommunication (\$31.3B)

[PlanGrid + FMI, 2018](#)

WHO

The site hierarchy FieldClaw plugs into

Field questions escalate: Super → PM → Architect/Engineer

Formal design RFIs are not filed to material vendors

Dotted support: project engineer · safety officer · suppliers (procurement)

PROBLEM

How information moves today

Who tells the foreman? Does the schedule shift?

The field learns when the truck doesn't show

Total latency: 1-2 days

illustrative site relay — not a cited study figure

SOLUTION

Skip the relay. Keep the decision human.

A phone call still fails when the foreman lacks the PO, the drawing, or the authority. The record dies when someone hangs up. The crew learns the answer when work has already stalled.

FieldClaw replaces that relay. Foremen report by voice from the site. The report is structured, matched to read-side PO context, and landed in one ops picture for the superintendent. Judgment stays with the super — the lost record and the phone chain do not.

Voice → structure → schedule flag → human decision → answer back to the field.
Next: how that path runs.

PRODUCT

How information moves with FieldClaw

1 • Capture

Foreman Telegram voice: "Rebar running low at Zone C, got maybe half a day"

2 • Structure

FieldClaw transcribes → extracts: shortage • rebar • Zone C • high urgency

3 • Context

Cross-references PO → 200 bundles on order from Acme Steel • ETA Thursday

4 • Ops picture

Gantt "Structural Framing – Zone C" → at-risk • Super dashboard: alert + impact

5 • Answer back

Telegram to foreman: "Logged. PO #9905 on file. ETA Thursday." • Crew unblocked

Same hierarchy. Shorter path. One shared picture.

The person who reported the shortage gets the ETA — before work stalls.

USE CASES

On-ground realities FieldClaw handles

What foremen and crew report that tools today still miss.

Daily progress

Zone updates →
Gantt shift ·
ahead/behind flags

Material shortages

Voice shortage → PO
match or super flag

Quality issues

Observation +
location · rework →
schedule impact

Safety / near misses

Severity tag ·
compliance record ·
notify if critical

Weather & site

Outdoor delay · re-
sequence · claims
log

Equipment down

Cascade blocked
tasks · impact for the
super

Trade conflicts

Clash logged · both
crews see it · re-
sequence

Inspections

Sign-off unlocks next
phase · PM notified

Field questions

Voice → super / PM
path · answer logged
on task

Crew & labor

Understaffed flag ·
resource gap on the
schedule

HOW

Proposed architecture, Stage 1

field-ops path · read-side PO context · no buy-side agent

WITH KAYA

Kaya covers the PO. FieldClaw covers the site.

KAYA

What was ordered

Procurement and supply-chain intelligence.
Office to suppliers.
POs, lead times, vendor workflows.

FIELDCLAW

What is happening

Execution-layer field intelligence.
Field to superintendent to field.
Voice, photos, ops picture, answers back.

A solid orange vertical bar is positioned on the far left side of the image, extending from the top to the bottom.

Thank you :)

Excited to build.
